

One Pacific chart, three atmospheric states, **three different legitimate answers** — and in none of them does the archive turn what it knows into a probability for the live system.

D1 Trough S-SE of Hawai‘i OUTLOOK AREA · NO CENTRE RATES REFUSED NHC formation 10% / 20% Pool 3 storms · ESS 2.5 3 of 10 required Below the gate the archive publishes counts and refuses rates. All eras give 6 storms here, 3 since 1971. Both fall short.	D2 Forecast formation area ANALYST-DECLARED REFERENCE CELL CONDITIONAL RATES · NO COMPOSED NUMBER NHC formation 0% / 50% Pool 15 storms · ESS 10.5 TS Cat 1 Cat 3 87% 47% 13% Given formation at this cell. Bars are 95% intervals over distinct storms.	EP142026 TD Fourteen-E OPERATIONALLY OBSERVED GENESIS · ATCF CONDITIONAL RATES + HISTORICAL TIMING Genesis 09/1800Z Pool 23 storms · ESS 18.2 Reached Cat 1: 30% median +42h forecast +72h +0h +48h +96h +144h Hours from genesis to hurricane strength. Median +42 h; the forecast +72 h on the same clock. Inside the historical distribution, not beyond it.

NO COMPOSED NUMBER

NHC’s formation probability and Storm Atlas’s cell-conditioned historical rate describe different conditioning events, so they are not multiplied.

insufficient history → refusal · sufficient pre-genesis history → conditional rates · formed cyclone → conditional rates + timing

UNCHANGED: no live-event probability · no unsupported composition
